MCQ Re-test

- BRCA 1 positive woman have _% increased risk of breast carcinoma
a. 10 b. 20 c. 40 d. 60
- Baretts esophagus is diagnosed by
a. Squamous metaplasia b. Intestinal metaplasia
c. Squamous dysplasia d. Intestinal dysplasia
- A patient who has undergone partial gastrectomy presents with neurologic symptoms. Most probable diagnosis
a. Folic acid deficiency b. Vitamin b12 deficiency
c. Thiamine deficiency d. Iron deficiency
- Pateys mastectomy following are preserved except
a. Teres major b. Teres minor c. Axillary vein d. Breast
- Following is a symptom of hypothyroidism
a. Hyperactivity b. Palpitations c. Diarrhea d. Hair loss
- hemorrhage after thyroidectomy is due to
a. External carotid artery b. Internal carotid artery
c. Superior thyroid artery d. Interior thyroid artery
- Anchovy sauce pus is seen in
a. Amoebic liver abscess b. Lung abscess c. Splenic abscess d. Pancreatic abscess
- Obstruction of IVC leads to
a. Dilatation of throacoepigastric veins b. Caput medusa
c. Hemorrhoids d. Esophageal varices
- The most common cause of small intestinal obstruction is
a. Intussusception b. Iatrogenic adhesions c. Trauma d. Carcinoma
- Margins of squamous cell carcinoma are
a. Inverted b. Evertes c. Rolled undermined d. Flat
- Most common cause of subarachnoid hemorrhage is
a. Hypertension b. Av malformation c. Berry aneurysm d. Tumors
- which is not a component of Glasgow coma scale
a. Eye opening b. Motor response c. Pupils size d. Verbal response
- which is non absorbable suture?
a. polypropylene b. catgut c. Vicryl d. polydioxazone
- Intestinal anastomosis strength is provided by
a. mucosa b. serosa c. submucosa d. muscularis mucosa
- Commonest cause if av fistula is
a. Congenital b. Traumatic c. Surgical creation d. Tumor erosion

MCQ Retest - 25/03/2016

1. **All are true about rectal cancer except**
 - a. most common symptom is hematochezia
 - b. precise location of tumour is done with rigid proctosigmoidoscopy
 - c. dissection lateral to endopelvic fascia investing the mesorectum causes local recurrence
 - d. radiation dose is 60 Grey
2. **Thimble bladder is seen in**
 - a. acute tuberculosis
 - b. chronic tuberculosis
 - c. neurogenic bladder
 - d. schistosomiasis
3. **Which is not seen in complete ectopic vesicae**
 - a. umbilical hernia
 - b. visible uretero vesical reflux
 - c. hypospadias
 - d. waddling gait
4. **For posterior urethral valve investigation of choice is**
 - a. cystoscopy
 - b. MCU
 - c. cystourethroscopy
 - d. retrograde urethroscopy
5. **Biopsy of parotid gland in Sjogrens syndrome shows**
 - a. neutrophils
 - b. lymphocytes
 - c. eosinophils
 - d. basophils
6. **Investigation using dye to find out stone in salivary gland is**
 - a. MR angiography
 - b. mammography
 - c. sialography
 - d. usg
7. **Common site of meningocoele is**
 - a. Lumbosacral
 - b. Occipital
 - c. Frontal
 - d. Thoracic
8. **Carrel's triangle is used in**
 - a. vascular anastomosis
 - b. tendon repair
 - c. bowel anastomosis
 - d. nerve repair
9. **Allen's test is useful in evaluating.**
 - a. Thoracic outlet compression
 - b. Presence of cervical rib
 - c. Integrity of palmar arch
 - d. Digital blood flow
10. **Gold standard to diagnose pulmonary embolism**
 - a. Chest xray
 - b. Pulmonary angiography
 - c. Ventilation perfusion scintiscan
 - d. Ct chest
11. **Treatment of choice in post operative lung collapse**
 - a. Needle drainage
 - b. Corticosteroid
 - c. Pulmonary resection
 - d. Endoscopic suction
12. **Contraindication for surgery in varicose veins**
 - a. DVT
 - b. Multiple incompetent perforators
 - c. Ulcer at ankle
 - d. None
13. **Carcinoma of breast is most commonly seen in which quadrant of breast**
 - a. Upper outer
 - b. Upper inner.
 - c. Lower inner
 - d. Lower outer
14. **Pateys mastectomy following are preserved except**
 - a. Teres major
 - b. Teres minor
 - c. Axillary vein
 - d. Breast
15. **Serum calcium is a marker for**
 - a. Anaplastic ca
 - b. Medullary
 - c. Follicular
 - d. Papillary

MCQ Retest

1. The most common site of morgagni hernia is
 - a. Right anterior
 - b. Right posterior
 - c. Left anterior
 - d. Left posterior
2. Bird beak appearance is seen in
 - a. Volvulus
 - b. Intussusception
 - c. Achalasia
 - d. Ulcerative colitis
3. Baretts esophagus is diagnosed by
 - a. Squamous metaplasia
 - b. Intestinal metaplasia
 - c. Squamous dysplasia
 - d. Intestinal dysplasia
4. The most common cause of small intestinal obstruction is
 - a. Intussusception
 - b. Iatrogenic adhesions
 - c. Trauma
 - d. Carcinoma
5. Postoperative ileus is pronounced in
 - a. colon
 - b. stomach
 - c. ileum
 - d. duodenum
6. In hashimoto disease, antibodies are mainly against
 - a. Thyroid follicles
 - b. Thyroxine
 - c. Thyroglobulins
 - d. Iodine
7. Carcinoma of breast is most commonly seen in which quadrant of breast
 - a. Upper outer
 - b. Upper inner.
 - c. Lower inner
 - d. Lower outer
8. Aromatase inhibitor used in CA breast are
 - a. Letrozole
 - b. Anastrozole
 - c. Exemestane
 - d. Tamoxifen
9. Most common cause of colonic obstruction is
 - a. Volvulus
 - b. adhesions
 - c. hernia
 - d. neoplasm
10. Renal stones which are laminated and irregular in outline are
 - a. uric acid
 - b. ca oxalate
 - c. struvite
 - d. cystine
11. Chemotherapy used for metastatic bladder cancer
 - a. adriamycin and cisplatin
 - b. interferon
 - c. MVAC
 - d. cisplatin alone
12. Sentinel lymph node in ca penis is
 - a. cabana
 - b. Virchow
 - c. delphian
 - d. darwins
13. The commonest site of oral cancer among indian population is
 - a. lip
 - b. tongue
 - c. cheek
 - d. palate
14. First line treatment for keloid is
 - a. Intralesional injection of keloid
 - b. Local steroid
 - c. Radiotherapy
 - d. Wide excision
15. Wolfe graft is
 - a. Thin split thickness graft
 - b. Thick split thickness graft
 - c. Medium thickness split skin graft
 - d. Full thickness skin graft

MCQ Retest 25/03/2017

1. Thyroid carcinoma during pregnancy, appropriate treatment is:
a. radioiodine131 b. Chemotherapy
c. Surgery d. Wait for delivery
2. The most common cause of fat embolism is:
a. Weight gain b. Weight loss
c. Bone fracture d. None of the above
3. About Burger's disease, all the following are true except:
a. May affect the upper limb b. May cause severe pain
c. There is intolerance to cold d. Inflammatory disease
4. Lumbar sympathectomy include removal of:
a. L1,2,3 b. L2,3,4
c. L3,4,5 d. None of the above
5. The most accurate method to evaluate lymphnodes involvement in esophageal cancer is:
a. Barium esophagogram b. Endoscopic US
c. CT scan d. Positron Emission tomography(PET)
6. The most common complication of hepatic hydatid disease Is:
a. Jaundice b. Rupture into peritoneal cavity
c. Suppuration d. Rupture into biliary channel
7. Which of the following complications of portal hypertension often require surgical intervention (formorethan25%ofpatients)?
a. Hypersplenism. b. Variceal hemorrhage.
c. Ascites. d. Encephalopathy
8. Regarding Splenic rupture all are correct except:
a. Maybe delayed for upto 2weeks following blunt trauma
b. Should be suspected if plain X-ray revealed raised left hemi-diaphragm
c. May displace gastric air bubble on plain X-ray
d. Produce a negative Kehr's sign
9. Concerning bilharzial cancer of the bladder ,it is untrue that it:
a. Is the commonest malignant tumor in Egypt.
b. Occurs at a much younger age than non-bilharzia! cancer.
c. Arises least often in the trigone.
d. Is usually of high-grade malignancy.
e. Produces hematuria and nocturia.

10. In penile hypospadias, it is untrue that:
- The urethral opening lies on the undersurface of the penis.
 - The corpus spongiosum is replaced by a fibrous cord.
 - The prepuce is deficient inferiorly.
 - The penis is curved downwards.
 - No treatment is necessary till the age of 4 years.
11. The precancerous possibility of gastric ulcer makes it different from duodenal ones in that:
- Regular followup by endoscopy is indicated.
 - Surgical treatment if no response to medical treatment within 8 weeks.
 - Aim of surgery to remove ulcer completely.
 - All of the above
12. Parotid gland is the most common salivary gland affected by following pathologies except:
- Acute bacterial sialadenitis.
 - Salivary stones.
 - Pleomorphic adenoma.
 - Adenolymphoma (Warthin's tumor).
13. Secondary hemorrhage is usually due to:
- Trauma.
 - Slipped ligature.
 - Infection
 - All of the above
14. Sliding hernia:
- May contain part of bladder wall
 - Causes partial irreducibility
 - Predisposes to complications
 - All of the above
15. The differential diagnosis of an inguinoscrotal swelling includes all of the following except:
- Oblique inguinal hernia
 - Hydrocele of a hernia sac
 - Buboncele
 - Lipoma of the cord

MCQ Retest -16/09/2017

1. Myoglobinuria is seen in which type of burn
a. flame burn b. electric burn c. scald burn d. contact burn
2. Margins of squamous cell carcinoma are
a. Inverted b. Everted c. Rolled undermined d. Flat
3. Most common cause of subarachnoid hemorrhage is
a. Hypertension b. Av malformation c. Berry aneurysm d. Tumors
4. Which is not a component of Glasgow coma scale
a. Eye opening b. Motor response c. Pupils size d. Verbal response
5. Commonly performed shunt for hydrocephalus is
a. Venticuloperitoneal b. Venticulopericardial
c. Venticulopleural d. Cervicopleural
6. which is non absorbable suture?
a. polypropylene b. catgut c. vicryl d. polydioxazone
7. Intestinal anastomosis strength is provided by
a. mucosa b. serosa c. submucosa d. muscularis mucosa
8. Commonest cause if av fistula is
a. Congenital b. Traumatic c. Surgical creation d. Tumor erosion
9. Coronary graft is most commonly taken from
a. Femoral vein b. Saphenous vein c. Axillary vein d. Cubital vein
10. Contraindication for surgery in varicose veins
a. DVT b. Multiple incompetent perforators
c. Ulcer at ankle d. None
11. Baretts esophagus is diagnosed by
a. Squamous metaplasia b. Intestinal metaplasia
c. Squamous dysplasia d. Intestinal dysplasia
12. A patient who has undergone partial gastrectomy presents with neurologic symptoms.
Most probable diagnosis
a. Folic acid deficiency b. Vitamin b12 deficiency
c. Thiamine deficiency d. Iron deficiency
13. Serum calcium is a marker for
a. Anaplastic ca b. Medullary c. Follicular d. Papillary
14. Blood stained nipple discharge is seen in
a. Breast abscess b. Fibroadenoma c. Duct papilloma d. Fat necrosis of breast
15. Which type of thyroid carcinoma has the best prognosis?
a. Papillary carcinoma b. Anaplastic carcinoma
c. Follicular carcinoma d. Medullary carcinoma

a. Injury to tail of pancreas b. Mesenteric ischemia
c. Bleeding esophageal varices d. Liver laceration
8. **The most common site of morgagni hernia is**
a. Right anterior b. Right posterior c. Left anterior d. Left posterior
9. **Bird beak appearance is seen in**
a. Volvulus b. Intussusception c. Achalasia d. Ulcerative colitis
10. **Most common cause of colonic obstruction is**
a. Volvulus b. adhesions c. hernia d. neoplasm
11. **Staghorn calculus is made of**
a. oxalate b. uric acid c. phosphate d. cystine
12. **Thimble bladder is seen in**
a. acute tuberculosis b. chronic tuberculosis
c. neurogenic bladder d. schistosomiasis
13. **Sentinel lymph node in ca penis is**
a. cabana b. Virchow c. delphian d. darwins
14. **Commonest tumor of parotid gland is**
a. warthins tumor b. pleomorphic adenoma
c. adenocarcinoma d. hemangioma
15. **Tripod fracture is seen in**
a. zygomatic bone b. maxilla c. T-M joint d. frontal bone

MCQ Retest- 22/9/2018**

1. In burns management, which of the following is the fluid of choice
a. Dextrose 5% b. Normal saline c. Ringer lactate d. Isolyte M
2. Treatment of choice for cystic hygroma is
a. percutaneous aspiration b. intralesional sclerosant injection
c. en-bloc resection d. surgical excision
3. Commonest tumour of minor salivary glands is
a. mucoepidermoid ca b. acinic cell ca
c. adenoid cystic ca d. pleomorphic adenocarcinoma
4. Tripod fracture is seen in
a. zygomatic bone b. maxilla c. T-M joint d. frontal bone
5. Allens test is useful in evaluating.
a. Thoracic outlet compression b. Presence of cervical rib
c. Integrity of palmar arch d. Digital blood flow
6. The following is the commonest site for venous ulcer
a. Instep of foot b. Lower third of leg and ankle
c. Lower $\frac{2}{3}$ of leg d. Middle third of leg
7. Varicose veins of size less than _ can be best treated by sclerotherapy
a. 2mm b. 3 mm c. 4 mm d. 6 mm
8. Most common site of development of ca prostate is
a. peripheral zone b. central zone c. transitional zone d. Anterior zone
9. Gleason score all are true except
a. used for grading prostate cancer b. scores range from 1-10
c. higher the score, poor the prognosis d. helps in planning management
10. For posterior urethral valve investigation of choice is
a. cystoscopy b. MCU c. cystourethroscopy d. retrograde urethroscopy
11. Psammoma bodies maybe seen in all except
a. Follicular carcinoma of thyroid b. Papillary carcinoma of thyroid
c. Meningioma d. Serous cysadenocarcinoma of ovary
12. which is true about hydatid cyst of liver
a. Surgical mgt is always done b. Conservative treatment is effective
c. Aspirations is safe d. Multilocularis is the most common cause
13. Most common benign tumor of liver is
a. Hemangioma b. Hepatic adenoma c. Hepatoma d. Hamartoma
14. Retrocardiac lucency with air fluid level is seen in
a. Hiatus hernia b. Achalasia cardia
c. Distal end esophageal obstruction d. Eventration of diaphragm
15. complications of reflux esophagitis
a. Stricture b. Schatzkis ring c. Barrett's esophagus d. All of the above

MCQ Retest- 25/03/2019

1. Concerning bilharzial cancer of the bladder, it is untrue that it:
 - a. Is the commonest malignant tumour in Egypt
 - b. Occurs at a much younger age than non-bilharzia cancer
 - c. Arises least often in the trigone
 - d. Is usually of high-grade malignancy
 - e. Produces hematuria and necroturia
2. In penile hypospadias, it is untrue that
 - a. The urethral opening is on the undersurface of the penis.
 - b. The corpus spongiosum is replaced by a fibrous cord
 - c. The prepuce is deficient inferiorly
 - d. The penis is curved downwards.
 - e. No treatment is necessary till the age of 4 years
3. The precancerous possibility of gastric ulcer makes it different from duodenal ones in that
 - a. Regular follow up by endoscopy is indicated
 - b. Surgical treatment if no response to medical treatment within 8 weeks
 - c. Aim of surgery to remove ulcer completely
 - d. All of the above
4. Parotid gland is the most common salivary gland affected by following pathologies except:
 - a. Acute bacterial sialadenitis.
 - b. Salivary stones.
 - c. Pleomorphic adenoma.
 - d. Adenolymphoma (Warthin's tumor).
5. Secondary hemorrhage is usually due to:
 - a. Trauma
 - b. Slipped ligature
 - c. Infection
 - d. All of the above
6. Sliding hernia:
 - a- May contain part of bladder wall
 - b- Causes partial irreducibility
 - c- Predisposes to complications
 - d- All of the above
7. The differential diagnosis of an inguinoscrotal swelling includes all of the following except:
 - a- Oblique inguinal hernia
 - b- Hydrocele of a hernia sac
 - c- Buboncele
 - d- Lipoma of the cord
8. Thyroid carcinoma during pregnancy, appropriate treatment is:
 - a. radioiodine 131
 - b. Chemotherapy
 - c. Surgery
 - d. Wait for delivery
9. The most common cause of fat embolism is:
 - a. Weight gain
 - b. Weight loss
 - c. Bone fracture
 - d. None of the above

MCQ Retest- 25/03/2019

10. About Burger's disease, all the following are true except:
- May affect the upper limb
 - May cause severe pain
 - There is intolerance to cold
 - Inflammatory disease
11. Lumbar sympathectomy include removal of:
- L1,2,3
 - L2,3,4
 - L3,4,5
 - None of the above
12. The most accurate method to evaluate lymphnodes involvement in esophageal cancer is:
- Barium esophagogram
 - Endoscopic US
 - CT scan
 - Positron Emission tomography (PET)
13. The most common complication of hepatic hydatid disease is:
- Jaundice
 - Rupture into peritoneal cavity
 - Suppuration
 - Rupture into biliary channel
14. Which of the following complications of portal hypertension often require surgical intervention (formorethan25%ofpatients)?
- Hypersplenism.
 - Variceal hemorrhage.
 - Ascites.
 - Encephalopathy
15. Regarding Splenic rupture all are correct except:
- Maybe delayed for up 2weeks following blunt trauma
 - Should be suspected if plain X-ray revealed raised left hemi-diaphragm
 - May displace gastric air bubble on plain X-ray
 - Produce a negative Kehr'ssign

MCQ Retest- 07/03/2020

1. Margins of squamous cell carcinoma are
a. Inverted b. Everted c. Rolled undermined d. Flat
2. Myoglobinuria is seen in which type of burn
a. Flame burn b. Electric burn c. Scald burn d. Contact burn
3. Most common cause of subarachnoid hemorrhage is
a. Hypertension b. Av malformation c. Berry aneurysm d. Tumors
4. which is not a component of Glasgow coma scale
a. Eye opening b. Motor response c. Pupils size d. Verbal response
5. Commonly performed shunt for hydrocephalus is
a. Venticuloperitoneal b. Venticulopericardial
c. Venticulopleural d. Cervicopleural
6. which is non absorbable suture?
a. Polypropylene b. Catgut c. Vicryl d. Polydioxazone
7. Intestinal anastomosis strength is provided by
a. Mucosa b. Serosa c. Submucosa d. Muscularis mucosa
8. Commonest cause if av fistula is
a. Congenital b. Traumatic c. Surgical creation d. Tumor erosion
9. Coronary graft is most commonly taken from
a. Femoral vein b. Saphenous vein c. Axillary vein d. Cubital vein
10. contraindication for surgery in varicose veins
a. DVT b. Multiple incompetent perforators c. Ulcer at ankle d. None
11. Baretts esophagus is diagnosed by
a. Squamous metaplasia b. Ntestinal metaplasia
c. Squamous dysplasia d. Intestinal dysplasia
12. A patient who has undergone partial gastrectomy presents with neurologic symptoms.
Most probable diagnosis
a. Folic acid deficiency b. Vitamin b12 deficiency
c. Thiamine deficiency d. Iron deficiency
13. Serum calcium is a marker for
a. Anaplastic ca b. Medullary c. Follicular d. Papillary
14. Blood stained nipple discharge is seen in
a. Breast abscess b. Fibroadenoma
c. Duct papilloma d. Fat necrosis of breast
15. The most common cause of fat embolismis:
a. Weight gain b. Weight loss c. Bone fracture d. None of the above

MCQ Retest-14/09/2015

1. Thyroid carcinoma during pregnancy, appropriate treatment is:
a. radioiodine131 b. Chemotherapy c. Surgery d. Wait for delivery
2. The most common cause of fat embolism is:
a. Weight gain b. Weight loss c. Bone fracture d. None of the above
3. About Burger's disease, all the following are true except:
a. May affect the upper limb b. May cause severe pain
c. There is intolerance to cold d. Inflammatory disease
4. The screening of hcc in chronic liver disease is
a. Serial usg + afp b. Serial l ft + afp c. Serial l ft + ct scan d. Serial usg + serial l ft
5. The most accurate method to evaluate lymphnodesinvolvement in esophageal cancer is:
a. Barium esophagogram b. Endoscopic US
c. CT scan d. Positron Emission tomography(PET)
6. Courvoisier's law is related to
a. Jaundice b. Ureteric calculi
c. Portal hypertension d. The length of skin flap in skin grafting
7. Treatment of choice for cystic hygroma is
a. percutaneous aspiration b. intralesional sclerosant injection
c. en-bloc resection d. surgical excision
8. Commonest tumour of minor salivary glands is
a. mucoepidermoid ca b. acinic cell ca
c. adenoid cystic ca d. pleomorphic adenocarcinoma
9. Tripod fracture is seen in
a. zygomatic bone b. maxilla c. T-M joint d. frontal bone
10. Allens test is useful in evaluating.
a. Thoracic outlet compression b. Presence of cervical rib
c. Integrity of palmar arch d. Digital blood flow
11. The following is the commonest site for venous ulcer
a. Instep of foot b. Lower third of leg and ankle
c. Lower 2/3 of leg d. Middle third of leg
12. Varicose veins of size less than _ can be best treated by sclera therapy
a. 2mm b. 3 mm c. 4 mm d. 6 mm
13. Most common site of development of ca prostate is
a. peripheral zone b. central zone c. transitional zone d. Anterior zone
14. Gleason score all are true except
a. used for grading prostate cancer b. scores range from 1-10
c. higher the score, poor the prognosis d. helps in planning management
15. For posterior urethral valve investigation of choice is
a. cystoscopy b. MCU c. cystourethroscopy d. retrograde urethroscopy
